Mr Laniado is a highly regarded, experienced Consultant Urologist practicing in London, with consulting rooms at the Nuada Medical on Harley Street. He has specialised in successfully treating patients suffering from prostate cancer and prostate enlargement for over 15 years. His main goal is to restore his patients back to full health as soon as possible after being threatened by prostate cancer or disturbed by urinary symptoms.

Mr Marc Laniado is an expert consultant urologist practising in Harley Street, London with over 15 years experience as a consultant specialising in prostate cancer and prostate enlargement. His mission is to restore men back to normal health when threatened either by prostate cancer or disturbed by urinary symptoms. He does this by focusing on the man's problems and compassionately applying his experience and judgement with the most modern tests and technology available.

Mr Laniado has been a consultant urologist since 2002, working on Harley Street and at the surrounding hospitals. Over the last 25 years, he has developed and delivered techniques for prostate problems extensively for private patients and NHS patients. His focus has always been on new and potentially better ways to treat his patients using an individualised approach. Over the years, he has performed keyhole surgery with and without robotics, delivered treatments without incisions by passing energy through the skin or other structures, and made use of unique energy forms.

As he is a full-time clinician not distracted by other responsibilities, highly experienced consultant urologist Mr Laniado's time is spent wholly on the needs of his patients, who have given him numerous 5-star reviews on patient review websites.

He studied at Guy's Hospital Medical School between 1983 and 1989, where he obtained a Bachelor of Medicine, Bachelor of Surgery as well as a BSc(Hons) in physiology. He finished urological specialist training in London in 2002, during which time he also obtained an MD for research into why prostate cancer cells that can spread to bones are like nerve cells, and completed the FRCS(Urol) exit exam. Before starting as a consultant in 2002, he spent time at the Cleveland Clinic acquiring minimally invasive surgical skills.
