Duplex Ultrasound Scan

Dr David West is an Interventional Radiologist who specialises in varicose vein treatment using a minimally invasive approach. Dr West runs Veincentre Ltd, one of the largest specialist varicose vein treatment centres in the UK with clinics in Bristol, London, Manchester, Nottingham and Staffordshire.

Dr West was one of the first vascular specialists in the UK to train in Endovenous Laser Ablation (EVLA, EVLT, ELves) and VNUS, and has personally undertaken over 10,000 successful EVLA treatments since 2003. In addition, he has extensive experience of other relevant minimally invasive venous treatments including embolisation, foam sclerotherapy, RF perforator ablation, Olympus RFITT and venous stenting. This comprehensive range of techniques enables all patients to be successfully managed without surgery.

Veincentre: non-surgical treatment of varicose veins

An internationally recognised expert in Endovenous Laser Ablation (EVLA) and radiofrequency ablation (VNUS closure), Dr West founded Veincentre to provide a modern, efficient and fairly priced service for people seeking treatment for varicose veins. All treatments at Veincentre are minimally invasive, resulting in a swift recovery and no scarring. Consultation and treatment can be performed in the same visit, with most appointments lasting under two hours.

Expert diagnosis and evaluation

Successful treatment of varicose veins is dependent on accurately assessing where the problem lies, for example seemingly innocuous spider veins can be a sign of valve damage in a more major underlying vein. Dr West personally conducts a colour duplex ultrasound scan at the beginning of every appointment in order to plan the most appropriate treatment.

Safe and effective treatment

The minimally invasive techniques used at Veincentre can be performed without the need for a general anaesthetic or surgical incisions. Their clinics are registered with the Care Quality Commission and a recent audit demonstrated effective treatment in 99% of cases with a 1% recurrence rate over 5 years. 95% of patients are satisfied or very satisfied with the outcome of treatment.

Fair pricing

Recognising that many people are not considered for varicose vein treatment on the NHS unless their condition is severe, Dr West established Veincentre to provide the most modern and efficient techniques at affordable and fair prices, with no hidden charges. The clinics are recognised by all major insurers in the UK and are able to offer low-cost credit for people who may need it.

Specialises in

- Endovenous Laser Ablation
- VNUS closure
- Embolisation
- Foam sclerotherapy
- Radiofrequency perforator ablation
- Venous stenting
