

Jonathan Byrne

Consultant Cardiologist

London

Dr Jonathan Byrne is a Consultant Cardiologist at King's College Hospital in London. A specialist in interventional cardiology, he provides private treatment of coronary artery disease at London Bridge Hospital and Bupa Cromwell Hospital.

As well as treating patients with angina, heart failure, arrhythmias and high blood pressure, Dr Byrne also treats patients with valvular heart disease with new treatments which do not require an operation, such as TAVI (transcatheter aortic valve implantation) and Mitraclip (percutaneous treatment of the mitral valve). He performs a number of imaging tests for the heart including transoesophageal echocardiography and cardiac CT scanning.

Dr Byrne is currently the Clinical Director of Cardiovascular services at King's College Hospital. He completed his undergraduate medical training in Bristol and continued general professional medical training in the South-East of England and London. He then undertook a PhD in the academic department of cardiology at King's College Hospital, examining molecular mechanisms underlying left ventricular hypertrophy. Following completion of his PhD, Dr Byrne undertook specialist training in cardiology on the South Thames rotation.

Dr Byrne's training in interventional cardiology was undertaken at King's College Hospital from 2004, and continued on Vancouver Island as a Boston scientific sponsored Interventional Fellow. Following his return to the UK in 2007, he completed his training in interventional cardiology, along with transoesophageal echocardiography and cardiac CT scanning. Since his appointment as a consultant in July 2008 he has also been involved in the development of the structural programme at King's College Hospital, with the use of novel percutaneous techniques to treat aortic and mitral valve disease.
