

Dhiya Houssien

Consultant Rheumatologist

London

Dr Houssien comes with over 20 years of experience in the treatment of pain. He manages his patients in his centre based on the prestigious Harley Street in London and uses a combination of alternative and traditional medicine.

Dr Houssein undertook his studies in medicine at King Abdulaziz University in Jeddah, followed by a Master's degree in rheumatology at Birmingham University, and finally a clinic PhD in rheumatology at King's College.

He is currently working as a rheumatologist in the Medical Subspecialties Centre in Jeddah, alongside training medical students in his clinic, and gives informative seminars at national and international conferences.

More recently, he has developed a non-drug based treatment of laser acupuncture for the management of back, neck, shoulder, and knee pain, which has been presented at several international conferences.

The primary goal was to treat patients more efficiently, reducing the number of treatment sessions to one or two sessions in addition to drug therapy if it is needed. Dr Houssein's method of treatments means that patients with painful conditions could be treated by just one or two sessions under his care.

This is one of the reasons why he has been chosen as one of top doctors in the UK.

Dr Houssein also has a centre for rheumatism, acupuncture, physiotherapy, psychology, neurosurgery and dermatology in Saudi Arabia.
