Fees

Consultation **£200**

Dr Kirkor is a highly skilled consultant in pain medicine and regenerative orthopaedics. Dr Kirkor was the clinical lead for pain services at the Shrewsbury & Telford Hospital NHS trust for over ten years, running a successful interventional pain management service, where he successfully treated hundreds of patients suffering with complex pain problems such as failed back surgery syndrome, lower back pain, CRPS and many more. Dr Kirkor took an early retirement from the NHS in 2020 to focus on his newly established regenerative orthopaedic clinic in London.

Dr Kirkor qualified from the Medical University of Gdansk, Poland in 1987. Shortly after this he went on to complete formal anaesthesia training in 1994 and continued to hold several high-ranking consultant posts. He moved on to obtain his PhD in medicine in 1996 and remained in Poland, enjoying a successful early medical career. Dr Kirkor moved to the UK in 2005, joining the Stoke Mandeville Hospital Pain Clinic, part of the National Spine Injury Centre (NSIC). In 2010 he made the move to Telford, Shropshire.

Dr Kirkor, together with his colleague Dr Martynas Juozaitis, has set up Algocells, a regenerative orthopaedic clinic affiliated with Regenexx, the renowned pioneering regenerative orthopaedic organisation from the United States, currently consisting of over 45 clinics worldwide. Algocells is the only Regenexx clinic in Europe and the UK.

Algocells is registered with Care Quality Commission and complies with relevant national and international regulations. The clinic employs the use of patients' own stem cells and platelet-rich plasma in state-of-the-art treatments for spine, discs, joints, ligaments and so on without the need of having a potentially risky operation.

Algocells utilises Regenexx patented procedures and stem cell processing in its own on-site laboratory. Both Dr Kirkor and Dr Juozaitis have completed extensive training with Regenexx clinic in Colorado, USA and continue their professional development in this area by attending several courses and conferences every year.

Dr Kirkor is one of very few specialist utilising, with great success, platelet rich plasma injections for the treatment of neck instability (Cranio-Cervical Joints instability) and cervicogenic headaches. He has developed his own original treatment method for degenerated discs, involving regenerative injection and pulsed radiofrequency stimulation.

The Algocells clinic is open on Mondays and Tuesdays 10:00 - 16:00 by appointment only.

Specialises in

- Regenerative orthopaedics
- Interventional spine pain management
- Interventional medicine concerning MSK conditions
- Whiplash injury and Whiplash-Associated Disorders (WAD)
- Complex Regional Pain Syndrome (CRPS)
